### **REASONS FOR ALLOWANCE**

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 3,765,736 to Pitner. The improvement comprises a motor pump unit with a crank space bottom, an axial bearing element for the bottom which, starting from the accommodating member, projects in the direction of the bottom and has a contact surface with an area that is smaller than the area of the outside surface of the bowl-shaped bottom for the purposes of reducing friction and wear of the motor pump unit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **PRIOR ART**

The patent to Pitner is cited for the showing of a motor pump unit similar to applicant's but lacking the axial bearing contacting the outside surface of the bowl shaped bottom.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of eight patents.

Greiff et al., Dinkel et al., Zorn, Hodge et al, Reinartz et al., Budecker, Morrow, and Edmund are cited to show motor pump units.

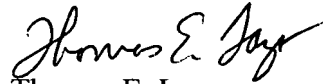

Art Unit: 3745
